Products for your RV

The use of certain chemicals, including formaldehyde, a common preservative found in RV toilet chemicals, is hazardous to the environment, humans and pets. OP Products have always produced "green" additives, avoiding any use of chemicals, from day one. Perfecting upon their development of Pure Power Green, they are now offering what they consider to be the most powerful, easiest to use and most economical RV holding tank additive yet developed, Pure Power Blue, Waste Digester and Odor Eliminator. Pure Power Blue is four times as concentrated as any near competition.

Featuring their proprietary "BioBlast Plus" technology, this new product uses bacteria and enzymes to break down waste naturally and safely. The company states that their biodegradable product will "control odor immediately, even in high heat conditions over 120°F." In addition, the bacteria and enzymes in their product enhance the sewage and septic systems to which they're introduced.

Pure Power Blue is available as a liquid in sizes ranging from 4 to 128 ounces. It is also available in convenient, dissolving, single-use pouches, in 6 or 12-pouch packages. The company states that a mere 2 ounces or 1 bio-pouch will treat a 40-gallon tank (an additional dose is recommended for temperatures above 105°F).

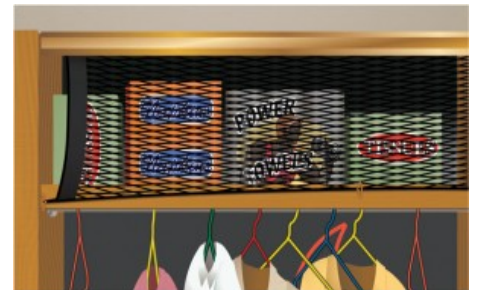

According to OP Products, "The bacteria used in their products are non-pathogenic, friendly Bacillus bacteria. These types of bacteria are cultivated from natural sources, therefore they are perfectly safe to use in any cleaning or maintenance situation."

The Pure Power Blue liquid is a lighter color than some of the traditional products and has a pleasant smell when opened. Simply add 2 ounces of Pure Power Blue to a gallon of water and that's it. The same for the bio-pouch; one gallon or just enough water to cover the bottom of the tank.

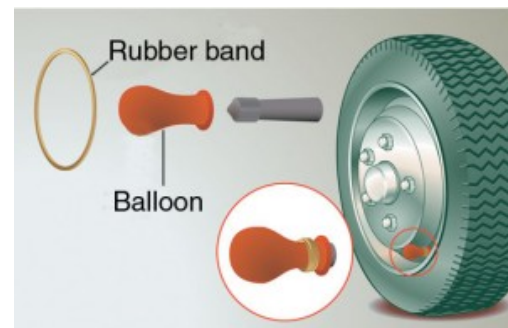

One claim the company makes is that it will break down any 2-ply household toilet tissue, meaning there's no need to use RV-specific, quick-dissolve paper, which of course, is more expensive than store brands.

Helpful Hints:

A great solution for closets. In order to prevent items from toppling out, purchase an elastic cargo net, which can be found at most auto-parts stores. Just screw in some hooks (around the shelf area) and when traveling, loop the ends of the netting over the hooks.

Sometimes a tire will develop a slow leak that's hard to find. Often the leak is in the tire valve core, which is a tiny spring-loaded device inside the tire valve stem. Here is what you can do with a suspect valve stem core. Slide a small balloon over the valve stem and secure it with a rubber band. If the balloon inflates after

being in place for several days, you have found your leak.
